ABOUT STOREBRAND

Storebrand Asset Management is Norway's largest private asset manager and a specialist in sustainable investing. Sustainability is integral to Storebrand's business and our ESG analysis, which aligns with the UN's Sustainability Development Goals, is fully integrated into the investment processes for all assets under management. Our long-term vision for the year 2050 is a world where nine billion people live well, within the earth's natural limits, and we believe that the companies which contribute to solving society's problems in a sustainable way will also be the most profitable in the long run.

INVESTMENT COMMENTARY

Storebrand Global Solutions is an actively managed global equity portfolio investing in sustainable impact companies. The strategy is fossil-free and seeks to generate alpha by identifying businesses from developed and emerging markets that provide solutions to help achieve the UN's Sustainable Development Goals. The portfolio is centred on four complimentary investment themes; renewable energy, smart cities, circular economy and equal opportunities.

- Of the four themes, equal opportunities has performed best so far this year, ahead of circular economy.
- Although renewable energy performed better in the second quarter, it still lags year-to-date, as does smart cities, despite strong performance in June.
- BYD Co continues to perform well and has now surpassed Tesla as the biggest electric vehicle company by recent sales figures. The Chinese company has continued to impress and been less sensitive than competitors to domestic COVID shutdowns. While most of the sales continue to be home market sales, several Chinese companies are now looking to expand internationally. Recently this space has been dominated by Chinese-owned European brands such as Volvo Cars and MG Motor.
- The rise in electric vehicle sales will continue to challenge mineral supply chains, placing a greater emphasis on recycling and effective use of minerals.
- The current energy situation continues to be a focus, with countries in the EU continuing to plan for a loss of Russian gas. While most options seem to be on the table, one should hope that increasing the use of coal remains a last resort for policy makers.
- Energy demand scenarios continue to be positive for companies in the renewable space.
- Volatility in the markets will remain high, and there is a lot of attention on China as it opens up from a continued lockdown. There are several factors at play here, ranging from supply chain blockages and a lack of production to effects on the demand side in China.
- In the US, President Biden's climate ambitions have been dealt a blow with a weakened EPA, and it will be interesting to see how he manages this going forward.
- The fund made no changes to its holdings in Q2.
